

# Better Hardwood Flooring

Better Service, Better Quality, Better Value

## What species and color should I choose?

There are several species, colors and grain variations to consider. Other than the walls, the floor represents the largest expanse of color or pattern in a room. Your floor should complement the fabrics, furnishings and accessories already present in the space, as well as enhancing the unique personality of the room as a whole.

**The most popular species/color** red oak natural with maple natural running second, but with today's decoration styles, anything goes.

**Darker colors** - formal or traditional interiors.

**Lighter colors** - country, casual or contemporary settings.
